Profile

Versatile IT professional and tech addict looking for big challenges.

Through my career I worked as software engineer, project manager and engineering manager, but I usually say that "I would serve coffee or do any other task if my goals depend on it". When my team lacks any skill, I myself try to fill the gaps, doing the best I can. Always focused on meeting the team's goals and growing them along the way.

public class Experience

Badges

new Experience (Project Manager at Ideais, 2011-2013)

Main responsibilities:

I've been given a team of 10 developers, 1 test analyst and the mission to create a new version of a system called Metricom. Its main purpose was to help managers to use better the company's money reserved for sponsorship. For the first time, I used my abilities as certified Project Manager to fulfill a client's premise. So we went full PMI in this project.
